

SILVERWING RMS2

High-Speed, Remote Access Robotic Corrosion Mapping System.

HIGH-SPEED, HIGH-ACCURACY ULTRASONIC CORROSION MAPPING

Silverwing RMS2 is designed to evaluate the condition of storage tanks, pipelines, pressure vessels and other critical equipment, supporting the integrity management processes to ensure effective and safe operation.

Silverwing RMS2 can give 100% coverage in a band up to 1000 mm wide, significantly increasing Probability of Detection (PoD) of defects and corrosion, enabling engineers to determine the optimum repair strategy and improve remaining life assessment (RLA) & risk based inspection (RBI) maintenance programs.

Flexible Solution

All Silverwing RMS2 scanning heads share the same high performance system controller so different scanning heads can be utilised depending on the inspection requirements.

The steerable tractor units incorporate high torque stepper motors and powerful magnetic drive wheels ensuring the scanner remains fixed to the inspection surface even whilst inverted.

A single crystal immersion transducer is held in a gimbaled probe holder ensuring it remains perpendicular to the surface and allowing it to ride over weld caps & lap joints up to 8 mm high. The stainless steel wear plate prevents transducer damage when scanning over rough surfaces.

Scanning Heads

Silverwing RMS2-600 scanning head is designed to maximize scanning rates on large surface areas such as tank shells, pressure vessels and other structures.

Silverwing RMS2-450 scanning head is designed for operating circumferentially on curved surfaces such as pipelines or pressure vessels from 152 mm (6 inches) up to flat plate.

Silverwing RMS2-300 scanning head is designed as a general purpose scanner for inspecting areas with limited access, vessel heads or other applications where smaller scan widths are required.

Silverwing RMS2 ARC 24 -36 and **RMS2 ARC 36-48**, designed to operate longitudinally on pipe diameters from 24" to 48". The combination of longitudinal pipe scanning and 60° scan width brings a major improvement to inspection efficiency for pipeline and slug-catcher applications while maintaining the high standard of data quality associated with Silverwing RMS2.

ADVANCED DATA ACQUISITION AND ANALYSIS SOFTWARE

Intuitive design with floating gates for greater accuracy, real-time A-Scan and C-Scan display, advanced defect sizing tools with increased re-analysis speed for efficient data investigation.

Acquisition and Analysis Software

Silverwing RMS2 software integrates scanner control, data capture, data analysis and reporting tools. The software shows a real-time display of the ultrasonic A-scan, C-scan, thickness measurement and positional data, with a maximum resolution of 0.5 mm x 0.5 mm. All of this information is recorded when a scan is saved.

Floating Gates & A-Scan Processing

A-scan waveform processing is fully digital, both in real time and during post processing. The system records A-scans in raw RF unfiltered form, which can then be processed afterwards, including rectification, filtering, wave smoothing and noise reject. This minimizes the set up on site and avoids re-scanning due to incorrect ultrasonic setup.

Floating gate “tracks” to the same percentage of the signal amplitude. This allows signals to be picked up which are much lower in amplitude improving the accuracy and increasing the efficiency of data analysis and reporting with greater inspection confidence.

B-Scan Amplitude

The B-scan amplitude view shows the B-scan profile in both X and Y dimensions at a selected point of the C-scan. Using the B-scan amplitude view, the operator can easily identify any defects or inclusions. Reviewing acquisitions in B-scan mode makes it easier to see indication such as small pits and inclusions.

C-Scan Layers & Multiple A-Scan Gates

The intuitive software is designed around the concept of C-scan ‘layers’. This allows the operator to quickly switch between each of the multiple C-scan views generated. During an inspection, the A-scan trace, B-scan amplitude view and resulting C-scan image are shown within the software in real time providing immediate inspection feedback.

Multiple A-scan gates can be added to measure between several parts of the A-scan trace. This means it is possible to measure the signal amplitude, part thickness, internal surface profile and external surface profile simultaneously.

APPLICATIONS

- Storage tank shells and roofs
- Horizontal storage tanks
- Pipelines
- Pressure vessels
- Spheres
- Ship hulls
- High temperatures assets up to 200°C

Silverwing CMAP Reporting

Silverwing CMAP can import data from a range of inspection systems building up an overall view of an inspection irrespective of the plant item being scanned e.g. storage tank shell or roof, pressure vessel, road tanker or marine vessel to name a few.

Silverwing RMS2 data can be automatically positioned and "stitched" together based on scan co-ordinates, this significantly reduces time in analysing inspection data.

Silverwing CMAP also contains dimension tools to annotate defect areas. These dimension markers can overlap different scans and be used for defect sizing, or adding positional information.

SPECIFICATIONS

SCANNER COMPARISON

RMS Model	Circumferential		Longitudinal		Flat Plate
	Min Internal	Min External	Min Internal	Min External	
600	2 m (79 in)	0.65 m (26 in)	5.6 m (221 in)	5.5 m (217 in)	yes
450	1 m (40 in)	0.15 m (6 in)	N/A	N/A	yes
300	2 m (79 in)	0.65 m (26 in)	1.65 m (65 in)	1.4 m (56 in)	yes
ARC 24-36	N/A	N/A	N/A	0.6 - 0.9m (24-36 in)	N/A
ARC 36-48	N/A	N/A	N/A	0.9 - 1.2m (36-48 in)	N/A

ULTRASONIC TECHNICAL SPECIFICATION

Pulse voltage	-40 to -300V, 256 steps
Pulse width	50 ns to 320 ns in 20 ns step
Damping	500Ω
Receiver gain	0 dB to 80 dB, in 0.1 dB increments
Filter	0.6 MHz to 18MHz fixed
Waveform	Full rectified, + half rectified, - half rectified or RF
Transmitter mode	Single, dual
Transducer range	1 to 10 MHz
Reject	Baseline compression

COMMON SCANNER SPECIFICATION

Scan grid	0.5 to 150 mm in 1 mm steps (0.02" to 6") independent X and Y
Maximum scan length	60 m (200 ft) at 10 mm (0.4") grid
Maximum scan speed	730 mm/s
Auto - position	Scanner movement to origin or selected point
Scanner identification	Automatic
Scanner control	Joystick controller and software
Umbilical cable	15 metre (optional 30 metre)
Temperature range	Up to 200°C
Power requirements	100 to 240 VAC - 50-60Hz

TRANSDUCER SPECIFICATION

Standard Transducer Specification

5 MHz 50 mm focus	6 - 12.5 mm, (0.25 - 0.5 in)
5 MHz 75 mm focus	12.5 - 50 mm (0.5 - 2 in)

Optional Transducer Specification

10 MHz 40 mm focus	1 - 6 mm (0.04 - 0.25 in)
2.5 MHz non-focused	50 - 150 mm (2 - 6 in)
5 MHz dual	2 - 100 mm (0.08 - 4 in) requires adapter

Others available on request

Transducer Holder Range

Standard	Maximum thickness 100 mm (4 in)
Extended	Maximum thickness 280 mm (11 in)
