Capture software version 4.0.1

Main fixes and optimizations between Capture v4.0 and Capture v4.0.1

- Improved TCG calibration refresh rate with PAUT

- Left/right keyboard arrows instabilities

- 5T and 5L TFM modes available with DLA and DMA

- Latencies to access the home page

- Chinese translation update

- Instrument S/N added to the inspection report (optional)

- Time recording mode increased up to 7 days (604 800s)

- Various optimizations for Panther control (increased scan speed, C-scan display…)

Known issues

- Data missed when changing gain during scanning

- Panther limitations (ATFM mode disabled, pause/resume issues, wrong max scan speed information)
